1) Download nodejs from
www.nodejs.org
2)choose the option which says LTE version.
3)Nodejs gets downloaded along with npm whoch is called the Node Package
Manager.
4)Once it is installed,open your command prompt.
5)Type node -v (node space minus v)
6)If your download has been installed correctly the above command prints out the
latest version of node js on your prompt
7) In the same manner, typing npm -v will give you the output of the latest version
of npm.
8) If you are successful until here we are ready to install testrpc
